

PARTS LIST FOR
HHS-303-1E1A

PUMP OIL GRADE:	SAE20 or 30 Non-Detergent
PUMP OIL CAPACITY:	15 oz.
FUEL NOZZLE:	2.25 80°B Delavan
BTU INPUT:	386,400
PRESSURE NOZZLE SIZE:	2.18mm

This Parts Listing has been compiled for your benefit. You can be assured your hot water pressure washer was constructed and designed with quality and performance in mind. Each component has been rigorously tested to insure the highest level of acceptance.

The contents of this Parts Listing are based on the latest product information available at the time of publication. The manufacturer reserves the right to make changes in price, color, materials, equipment, specifications or models at any time without notice.

WARNING

THIS IS A PROFESSIONAL HIGH PRESSURE, HOT WATER PRESSURE WASHER. CAUTION SHOULD BE OBSERVED WHEN USING OR REPAIRING THIS UNIT! READ AND FOLLOW THE SAFETY WARNINGS LISTED BELOW BEFORE ATTEMPTING ANY REPAIRS ON THIS PRESSURE WASHER!

SAFETY WARNINGS

- 1. NEVER alter or modify the equipment. Be sure any accessory items and system components being used will withstand the pressure developed. Use only genuine manufacturer parts for repair of your pressure washer. Failure to do so can cause hazardous operating conditions and will VOID warranty.
- 2. This unit has multiple safety devices which should never be altered, modified, removed or made inoperable. If a device fails, replace immediately with only genuine manufacturer replacement parts.
- 3. Electrical System: The unit must be connected to a properly grounded electrical source which provides the correct voltage and adequate fuse protection. Disconnect from power source when making repairs. Never assume the pressure washer is safe to work on just because it is not operating. It could restart at any time. Never operate the pressure washer with electrical enclosures open, removed or damaged. Do not allow metal components of the pressure washer to come in contact with live electrical components.
- 4. Do not operate the unit without all protective covers in place. Know how to stop and bleed pressures quickly. Be thoroughly familiar with controls.
- 5. Before servicing the unit, turn unit off, and trigger the gun to release trapped pressure. Do not make repairs while the unit is running. Service in a clean, dry, flat area.
- 6. After testing the machine, DO NOT leave the pressurized unit unattended. Shut off the unit and release trapped pressure before leaving.

SPECIFICATIONS

MODEL NUMBER	HHS-303-1E1A
Operating Pressure (PSI/Bar):	300/21
Steam Volume (GPM/lpm):	2.35/8.89
Outlet Water Temperature (F/C):	235°F/ 113°C (+/- 10°F) rise above inlet ambient
Electrical System:	
Phase	Single
Hz	60
Voltage	115
Total System Amperage	18.2
On/ Off Switch	Industrial Cam Switch
Motor (Pump):	
ODP	
Horsepower	1.5
RPM	1750
Service Factor	1.15
High Pressure Pump:	
Belt Driven, Oil Bath, Triplex Piston	
Oil Type	SAE20 or 30 Non-Detergent
Oil Capacity (oz. / liters)	15/0.44
Plungers	Ceramic
Manifold	Forged Brass
Valves	Stainless Steel
Water System:	
Inlet Water Strainer	Removable Thimble for inspection and cleaning of Stainless Steel Screen
Float Tank Strainer	Removable Strainer for inspection and cleaning of Stainless Steel Screen
Float Tank Capacity (Gal. / Liters)	4.75/18.0
Unloader	Pressure Trapping, Preset
Thermal Relief Valve	Protects pump against damaging heat in recirculated and inlet water.
Detergent System	Adjustable Metering Valve
Burner Fuel System:	
Fuel Type	No.1 or No.2 Fuel Oil, Diesel or Kerosene
Fuel Capacity (Gal. / Liters)	10/37.8
Fuel Filter/ Water Separator	Spin on (10 micron) filter/ E-Z water drain
Fuel Pump	Two Line, Single Stage
Fuel Pressure (PSI / BAR)	150/10.4
Fuel Nozzle	2.25 80° B Delavan
Fuel Consumption (GPH / LPH)	2.76/10.4 Cont. Burning
Burner Electrical System:	
Voltage	115
Amps	3.0
Heat Exchanger:	
Horizontal, Side Fired, Pancake Coil	
BTU Input	386,400
Efficiency	75% with #2 Fuel Oil/ Diesel
Smoke Density	0-3 per ASTM D2156
Safety Relief:	
Pressure Switch	Shuts off burner fuel supply upon trigger release
High Limit Switch	Shuts off burner fuel supply when outlet water temperature exceeds 225°F/107°C
Fuel Solenoid Valve	115 Volt, controls fuel supply to burner
Safety Relief	Relieves excess system pressure
Steam Nozzle:	
2.18 mm	
Unit Net Weight (Lbs/Kg)	
460/208.5	
Unit Shipping Weight (Lbs/Kg)	
580/263	
Unit Net Dimension (In/Cm)	
56.5Lx30Wx41.5H/143.5Lx76Wx105.5H	
Unit Shipping Dimension (In/Cm)	
57.5Lx35.5Wx59.5H/146Lx90Wx151H	
Warranty:	
Unit	(2) Two Year Limited Warranty
Coil	(5) Five Year Limited Warranty
AR Pump Crankcase	(5) Five Year Limited Warranty
Pump Manifold	(10) Ten Year Limited Warranty

FLOW CHART

HHS-303 FLOW DIAGRAM-101105-RZ

GENERAL THEORY OF OPERATION

WATER FLOW: Connect a pressurized water source to the INLET GARDEN HOSE CONNECTION (1) and turn on the water supply. The water will flow through a WATER STRAINER (2) and then through a FLOAT VALVE (3) into a WATER FLOAT TANK (5). If the water rises above the OVERFLOW HOLES (4), the excess water will drain out the unit.

The water is then drawn through the WATER STRAINER (6) and into the TRIPLEX HIGH PRESSURE PUMP (7) which has an UNLOADER (8) that bypasses the water when the trigger gun is closed. To protect the pump from heated water during this bypass stage, a THERMAL RELIEF VALVE (9) will open at 140°F/60°C allowing the heated water to escape. The Thermal Relief Valve automatically resets when the water cools. Attached to the pump is a BURNER CONTROL PRESSURE SWITCH (10) that controls the fuel supply to the burner.

When using detergents, the solution passes through the DETERGENT STRAINER (11) located on the DETERGENT HOSE (12). The detergent solution then travels through the DETERGENT METERING VALVE (13).

From there, the water flows through HEAT EXCHANGER INLET (14) where it is heated when the burner is on. As the water exits the HEAT EXCHANGER OUTLET (15), it enters a safety system which protects the operator from danger. The system also contains a HI-LIMIT TEMPERATURE SWITCH (16) which senses the water temperature and shuts off the fuel supply to the burner if the water gets too hot. If the unloader fails to bypass water or the burner remains on when the trigger gun is closed, the SAFETY RELIEF VALVE (17) will relieve and allow water to exit safely.

The heated water then flows through the HIGH PRESSURE HOSE (18) and to the TRIGGER GUN ASSEMBLY (19) which allows the operator to control the water spray. When the trigger gun is open, the water flows through the ADJUSTABLE PRESSURE DUAL LANCE (20) and exits the NOZZLE (21).

FUEL FLOW: The Fuel Pump draws fuel from the FUEL TANK (22) through a replaceable FUEL FILTER (23) and into the FUEL PUMP (24). Fuel exits the fuel pump, into a FUEL SOLENOID VALVE (25) which controls fuel flow to the FUEL NOZZLE (26) where it ignites and burns in the heat exchanger.
